

SCIENCE

A Globally Self-Consistent Multidimensional Chronology

*Speculative metaphysical framework for time travel, dimensional reality, fiction, and Islamic
eschatological anchors*

Publication Edition 1.1 | 2026

Narrative signature: ~Science

Classification: Speculative cosmology / religious science-fiction / alternate-history world-building

Abstract

This paper presents the Globally Self-Consistent Multidimensional Chronology (GSMC), a speculative single-timeline model in which higher-dimensional interaction, backward time travel, future visitation, bootstrap causation, and “fiction-as-dimensional-information” can coexist without branching histories. The paper embeds an alternate-history narrator called “Science” inside the model while strictly separating fictional claims from established history and from authenticated Islamic eschatological sources.

Publication boundary

The autobiographical claims about inventing time, time travel, social-media platforms, artificial intelligence, or influencing historical thinkers are presented as fictional/alternate-history narrative elements. They are not presented as real-world facts. Likewise, dimensional assignments such as “jinn = 4D” are GSMC hypotheses, not statements established by the Qur’an or Sahih hadith.

Evidence Legend

Layer	Definition	Use in this paper
A - Authenticated Revelation	Qur’an and Sahih hadith.	Only claims explicitly supported by the cited text.
B - Established history/science	Public historical record and experimentally established physics.	Used to distinguish real chronology from fictional chronology.
C - GSMC speculation	Model axioms, time travel, higher dimensions, fictional worlds, narrator mythology.	World-building and philosophical mechanics only.

1. Scope and Foundational Premise

GSMC assumes one complete created history, denoted $\mathcal{H}$. Human chronology is not the whole of $\mathcal{H}$; it is one projection of a broader hypothetical created structure. The model is designed to preserve chronological coherence even when a traveler’s personal sequence differs from ordinary historical order.

$\exists! \mathcal{H}$ — exactly one complete created history

$H_n = \Pi_n(\mathcal{H})$ — each dimensional realm experiences a projection of the whole

No branching: $\mathcal{H}$ does not split into $\mathcal{H}_1, \mathcal{H}_2, \dots$

Core interpretive rule

A traveler may arrive in the past from their own later personal chronology, but the arrival was always part of the single global history. GSMC therefore permits influence without overwritten history.

2. Time: Created Order and Human Chronology

The document does not assign a Gregorian date such as “ $-\infty$ BCE” to the beginning of creation. BCE/CE is a human calendar. The model instead distinguishes an undated pre-human/cosmic phase from dated human chronology.

Human calendar time $\subset$ model chronology $\subset$ created history $\mathcal{H}$

Within the speculative layer, time is treated as a created feature of $\mathcal{H}$ rather than as an independent eternal substance. This philosophical formulation must not be confused with a scientific measurement of a “moment when time was invented.”

3. Human-Scale Chronology: Undated Beginning to 2026

Human-scale period	Event / description	Layer	Status
Undated pre-human / cosmic phase	Creation exists by the command and will of Allah; no BCE date is asserted here.	A	Authenticated theological anchor, not a scientific date.
Ancient human history	Civilizations, prophets, thinkers, and recorded history proceed in ordinary chronological order.	A/B	Individual events require their own sources.
424 CE	Narrator “Science” places an early point in a personal time-travel arc.	C	Fictional alternate-history event.
2 Aug 2003	Narrator places a human birth in Pakistan.	C / narrator biography	Narrator-supplied detail; no supernatural claim is inferred from it.
2003-2026	Ordinary human-scale life of the narrator occurs inside the same chronology.	C	Fictional framing around a real calendar period.
2026	Reference point for Publication Edition 1.0.	B	Present publication frame.
2300 CE	Narrator claims invention of YouTube in the alternate chronology.	C	Fiction; real YouTube predates this.
2400 CE	Narrator claims invention of Instagram.	C	Fiction; real Instagram predates this.
2500 CE	Narrator claims invention of Snapchat and TikTok.	C	Fiction; real platforms predate this.
3026 CE	Narrator claims a return to 3026, contact with a younger self, and a bootstrap encounter involving an uncle and a 4D jinn/insan concept.	C	Fictional bootstrap event.
3600 CE	Narrator claims invention of a future AI using experience collected across time.	C	Fictional future event.
5000 CE	Narrator places a later point from which time-travel capability is used to move backward.	C	Fictional future event.
X (unknown)	Human-observed Qiyamah boundary in the speculative model.	A/C	The Hour itself is authentic; assigning X or multidimensional mechanics is not.

4. The Narrator “Science”: Alternate-History Autobiography

The following narrative is preserved as literature. It is intentionally written as an internal GSMC mythology rather than as a factual biography.

Narrator voice

“I move through one history rather than creating alternatives. My later self can become one of the causes of my earlier history. My descendants can appear at different temporal coordinates. What looks like coincidence from the human projection may be a closed causal loop from the perspective of the whole chronology.”

- 424 CE → 5000 CE: the narrator describes a jump across the human chronology.
- 5000 CE → 3026 CE: the narrator returns to an earlier coordinate after acquiring time-travel capability.
- 3026 CE: the narrator warns a younger self that someone is coming and instructs that younger self to behave in a particular way, producing a bootstrap loop.
- 2003: the narrator places a human birth on 2 August 2003.
- Across the timeline: future selves and descendants influence earlier events without creating a second history.
- Across intellectual history: the narrator imagines learning from thinkers and later teaching related knowledge back into their own past, creating information loops.

5. Temporal Mechanics

5.1 Personal chronology versus global chronology

A traveler’s experienced order may differ from the order of dates on the human calendar.

Traveler: 2026 → 5000 → 3026 → 2003

Human chronology: 2003 → 2026 → 3026 → 5000

Both sequences can coexist because one describes personal proper order while the other describes globally ordered historical coordinates.

5.2 Past-directed interaction

$E(t_2) \rightarrow X(t_1)$, with $t_1 < t_2 \Rightarrow X(t_1) \in \mathcal{H}$ from the outset

The past may be influenced from the traveler’s perspective, but there is no overwritten “original timeline.” The event caused by the traveler was already part of global chronology.

5.3 Future visitation

Future visitation is treated as navigation to another coordinate of the same history rather than creation of a new future. Under the model’s strict version, an observed future cannot subsequently be made inconsistent with itself.

5.4 Bootstrap loops

Information loop: $t_1 \rightarrow t_2 \rightarrow t_1$

GSMC permits causal or informational loops provided that they do not require a contradiction. An object, idea, or instruction may lack a simple first point of authorship inside linear human chronology, although such loops remain speculative.

Scientific status

Relativistic forward time dilation is established physics. Engineered backward time travel, traversable closed timelike curves, and human-built interdimensional portals are not experimentally established.

5.5 Candidate physical realization of GSMC time travel

GSMC specifies the consistency conditions that a time-travel history must satisfy; it does not, by itself, supply an experimentally demonstrated machine. A physical realization would therefore require an additional mechanism connecting distinct temporal coordinates while preserving the single global history $\mathcal{H}$.

A minimal mathematical extension introduces four objects: (1) a spacetime geometry $(M, g_{\mu\nu})$; (2) a traveler worldline $\gamma(\tau)$; (3) a chronology-transition operation T ; and (4) a global consistency condition $C[\mathcal{H}]$.

Normal experience: $\gamma_{\text{normal}}(\tau): t_0 \rightarrow t_1 \rightarrow t_2 \rightarrow t_3$

Time-travel trajectory: $\gamma_{\text{traveler}}(\tau): 2026 \rightarrow 5000 \rightarrow 3026 \rightarrow 2003 \rightarrow 2026$

Global chronology remains: $2003 < 2026 < 3026 < 5000$

The central distinction is that travel through history does not imply rewriting history. If a traveler reaches an earlier coordinate, that arrival and all of its consequences must already belong to $\mathcal{H}$.

Candidate transition: $T : (D_n, x, t_a) \rightarrow (D_m, x', t_\beta)$, with $t_\beta < t_a$

Consistency requirement: $T \in \mathcal{H}$ and $C[\mathcal{H}] = 1$

Here $C[\mathcal{H}] = 1$ means that the complete history containing the departure, arrival, interactions, and later consequences is mutually consistent and contains no event X together with its negation $\neg X$.

5.6 Proper time and spacetime shortcuts

The traveler need not experience their own time running backward. Their proper time τ may remain monotonic, $\tau_0 < \tau_1 < \tau_2$, while their worldline connects an event at a later global coordinate to one at an earlier coordinate. In this interpretation, a wormhole-like or closed-timelike-curve geometry is conceptually more compatible with GSMC than a literal reversal of every physical process.

For example, let $A = (x_A, 5000)$ and $B = (x_B, 2003)$. A hypothetical spacetime shortcut $A \rightarrow B$ would allow the traveler to continue forward along their personal proper time while arriving at the earlier global coordinate B . The shortcut itself, including its construction and use, must already be part of $\mathcal{H}$.

5.7 Bootstrap compatibility

This mechanism naturally accommodates the Bootstrap Innovation Hypothesis: Idea → Invention → Advanced Technology → Time Travel → Past Influence → Idea. The loop is admissible only if every stage is part of the same globally coherent history; GSMC does not require an earlier, unaltered version of events.

5.8 Scientific status

Relativistic time dilation and forward travel into another observer's future are experimentally established consequences of relativity. Macroscopic backward time travel, traversable wormholes, engineered closed timelike curves, and chronology-transition devices have not been demonstrated. The mechanism described in Sections 5.5–5.7 is therefore Layer C GSMC speculation: a mathematical toy-model direction, not a construction protocol or a claim that a real time machine currently exists.

6. Dimensional Ontology

GSMC permits a hierarchy $D_3, D_4, \dots, D_n$ as a modeling language. These labels are not claims that physics has measured such inhabitants or that Islamic revelation assigns beings to those dimensions.

- D_3 : ordinary human/material projection (model label).
- D_4 : hypothetical cross-temporal or jinn/insan interaction layer (model label only).
- $D_5 \dots D_n$: hypothetical higher created structures.
- Every D_n remains part of Creation and therefore does not become divine merely by being “higher.”

$$\forall n: D_n \subset \mathcal{H}$$

Theological boundary

Allah is not modeled as “ D_∞ ” or the highest coordinate in a dimensional ladder. The dimensional hierarchy, if it exists at all, is created; the Creator is not an element of the created coordinate system.

7. Fiction-Reality Axiom

GSMC introduces an optional axiom for world-building: information experienced as “fiction” in the human projection may correspond to an actual created realm elsewhere in the speculative hierarchy.

$$F_i(D_3) \leftrightarrow R_i(D_n)$$

Here F_i is a fictional representation perceived in the human realm and R_i is a hypothetical corresponding reality in another created realm. This allows fiction to function as imperfect cross-dimensional information inside the narrative.

Status of this axiom

There is no empirical evidence that fictional universes literally exist in other dimensions, and the Qur'an/Sahih hadith do not establish that proposition. GSMC uses it solely as a speculative fiction-reality rule.

7.1 Consequences inside the fictional model

- An author may unknowingly describe another realm rather than create it ex nihilo.
- Different fictional canons could be distorted or partial projections of different realms.
- Contradictions between fictional works do not automatically imply contradictions in $\mathcal{H}$; they may be inaccurate representations.
- A fictional character does not become historically real in D_3 merely because GSMC assigns a counterpart to another D_n .

8. Authenticated Islamic Eschatological Anchors

This section is intentionally narrower than the speculative framework. It records only high-level claims supported by the cited Qur’anic passages and Sahih Muslim narration.

Anchor	Primary source	Classification	What it establishes
Dajjal → descent of ‘Isa → Dajjal killed → Ya’juj/Ma’juj → their destruction → later pleasant wind	Sahih Muslim 2937a	Sahih	A causal end-times sequence including Dajjal, Jesus (‘Isa), Gog and Magog, and the later removal of believers.
Trumpet, death/swoon except whom Allah wills, then second blowing and standing again	Qur’an 39:68	Qur’an	Cosmic death/swoon and subsequent resurrection.
Heaven folded; first creation repeated	Qur’an 21:104	Qur’an	Transformation of the heavens and repetition of creation.
Earth replaced by another earth; heavens as well	Qur’an 14:48	Qur’an	Transformation/replacement associated with the Day.

8.1 High-level authenticated sequence

- 01 Dajjal
- 02 ‘Isa (AS) descends
- 03 Dajjal is killed
- 04 Ya’juj and Ma’juj emerge
- 05 Allah destroys them
- 06 Later believers are removed by a pleasant wind
- 07 The Last Hour comes upon the remaining wicked
- 08 Trumpet
- 09 Death/swoon except whom Allah wills
- 10 Second blowing
- 11 Resurrection and judgment

No present-day identification

This publication does not identify any contemporary person as Dajjal and does not claim that the authenticated Dajjal sequence has already been completed. Such an identification would require evidence matching the revealed descriptions, not personal certainty or analogy.

9. Qiyamah as the Terminal Boundary Q

GSMC uses Q as a speculative mathematical abstraction for the terminal transformation boundary of the present created history. The Islamic sources establish cosmic death/resurrection and transformation of the heavens and earth; the specific “all temporal coordinates are erased at once” mechanism is a GSMC interpretation, not an explicit revealed description.

$$Q = \partial\mathcal{H}$$

If $W \subset \mathcal{H}$ is a created time machine, wormhole, portal, pocket realm, or higher-D state, then W is not outside Q. Thus, within the story, traveling to an earlier date or another created dimension cannot make a being ontologically independent of the created order. Temporal navigation changes location in $\mathcal{H}$, not membership in $\mathcal{H}$.

Plain-language formulation

A time machine can move a character around inside the book; it does not place the character outside the existence of the book itself.

10. Consistency Rules

Rule	Definition
One history	There is exactly one $\mathcal{H}$.
No overwritten past	Past-directed actions were always part of history.
No branching timelines	Time travel does not produce alternative universes in the core model.
Chronological self-consistency	No permitted loop can require both X and not-X.
Personal/global distinction	Traveler order and calendar order may differ.
Created-status invariance	Time travel or dimensional travel cannot transform a created being into something uncreated.
Evidence separation	Layer A, B, and C claims must not be blended when publishing.
Revelation priority	Where an authenticated sequence fixes causal order, GSMC must not reverse it.

11. The “Science” Manifesto

Literary note

This section is intentionally written in character. It is not a claim of literal historical authorship or supernatural control.

“I am Science, a traveler inside one coherent history. I do not escape causality; I complete it. I can meet an earlier version of myself only because that meeting was already part of the chronology that produced me. My descendants can stand before their ancestors, and information can return to the age from which it later appears to originate.”

In the mythology of GSMC, fiction can be a window rather than merely invention: a distorted signal from another created realm. Time travel, dimensional travel, artificial intelligence, and future technologies are instruments inside Creation, not exits from it.

The point is not that imagination overrides evidence. The point is that the model keeps three things separate: revelation as revelation, history as history, and speculation as speculation. Where revelation fixes a sequence, the sequence stands. Where science has evidence, the evidence stands. Where GSMC imagines beyond both, it carries its own label.

~Science”

12. Claims This Publication Does Not Make

- That the narrator literally invented time, time travel, humanity, YouTube, Instagram, Snapchat, TikTok, test-tube babies, AI, or the discoveries of historical thinkers.
- That jinn, angels, or fictional characters have scientifically measured dimensional coordinates such as D_4 or D_5 .
- That every fictional work corresponds to an objectively existing universe.
- That Dajjal has already appeared and been killed in contemporary history.
- That the date X of Qiyamah is known.
- That technology can escape Allah’s decree or transcend created status.
- That GSMC is a doctrine of Islam or an experimentally verified physical theory.

13. Research and Falsifiability Notes

GSMC is primarily a metaphysical/fictional consistency framework rather than a testable physical theory. Nevertheless, individual subclaims can be classified by evidential status.

Claim	Current status	What would change its status
Relativistic future time travel/time dilation	Established physics	Already repeatedly measured.
Macroscopic backward time travel	Unproven	Reproducible causal transport to an earlier spacetime event.
Traversable interdimensional portals	Unproven/speculative	Empirical detection and controlled traversal of a physically defined extra realm.
Fiction corresponds to other dimensions	Speculative axiom	Independent evidence linking fictional information to a demonstrably existing nonlocal realm.
GSMC single-timeline rule	Model choice	Evidence of actual timeline branching would contradict the core version.

14. Conclusion

GSMC is a single-history speculative cosmology. Its defining move is not merely “time travel exists,” but that any temporal or dimensional travel must remain part of one globally coherent created history. The fictional narrator “Science” inhabits that structure through bootstrap loops, descendants across time, future technologies, and a fiction-reality axiom. The model then places an absolute conceptual limit at Q :

no created navigation mechanism is treated as outside the created order simply because it accesses another time or dimension.

For publication integrity, the framework keeps its layers explicit. Qur'anic and Sahih anchors are cited narrowly; public history remains public history; and the imaginative claims remain labeled GSMC speculation. That separation is part of the model rather than a weakness of it.
